Introduction

Infowise List Marquee is a SharePoint web part, which presents list items in a scrolling view. The scroll direction and speed are fully customizable, as well as the list origin, view and title. The component is capable of showing content of any list located in the current site or any site on the server, provided that the user is granted access to the list.

Installation

Note: as the product is installed as a SharePoint Solution, you need to install it only once, regardless of the number of your front-end servers.

Run the installation package from one of your front-end server machines and follow the on-screen instructions. You do not have to change the default settings.

Registration

If you have purchased the product, use the *Infowise Capability Dashboard* management page accessible through the *Central Administration* site. Enter the License Key under corresponding product. If no License Key is entered, the version is time-limited to 30 days. Both full and time-limited versions contain the same functionality.

Usage

The following instruction guides you step-by-step through the process of setting up a sample Infowise List Marquee implementation. Your real-life settings procedure is very similar.

1. Placing the web part on a page

Enter the edit mode of the page from the Site Actions menu. Click on Add Web Part link in the desired web part zone. Select the web part from the list; it is located in the Miscellaneous section. The web part is now added to the page.

2. Configuring settings

Your web part needs to be configured to begin showing data. From the web part menu select Modify Shared Web Part. The following paragraphs explain the settings of the different sections.

2.1. Configuring Data Settings

- Site URL – URL address of the source site, can be left blank for the current site.

- List Name – display name of the source list. The source list must be located in the source site. You have to enter a value in this field.

2.2. Configuring Display Settings

- View Style – whether to use the original list view style (4 different view styles are supported, including the Boxed view) or the special marquee style. Please note that for the horizontal scrolling you have to select the Marquee view style.
- Default View – select the name of the source list view. The view specifies the style, filtering, sorting and field selection of the web part. If left blank, the list's default view is used. Please note that you cannot use special view, e.g. Spreadsheet view or Explorer view.
- Open Link in New Window – whether to open all links in a new window.
- Custom Title – by default, the web part receives the title of the source list. You can override this setting by providing a custom title.

2.3. Configuring Marquee Settings

- Marquee Speed – specify a value for the marquee speed, from 1 (the slowest) to 10 (the fastest)
- Marquee Direction – specify the scroll direction. Please note that you have to select the Marquee view style for the horizontal scroll.
- Show Column Headers – whether to show the column headers above the columns.
